

## Cardiac System Support

All breeds and ages are prone to heart disease. The heart is the number one organ that responds greatly to nutrition. Therefore, it makes sense to always support the heart nutritionally when dealing with any heart condition.

Standard Process Cardiac Support contains a synergistic grouping of whole food nutrients, tissue extracts, concentrates and botanical ingredients. Broad support for the heart requires recognition of the array of tissues that contribute to optimal cardiac function. These tissues include the cardiac muscle, cardiac excitatory and conductive cells, endothelium, and nerve cells. Nutritional support should provide nutrients and other substrates that contribute to optimal function of each of these tissues. Standard Process Cardiac Support should be given to all patients with cardiac abnormalities ranging from valvular insufficiency to arrhythmias. Application of this product to this range of condition is appropriate due to its combination of ingredients that provide important factors for the variety of involved tissues. Cardiac function is not stimulated or suppressed. Rather, the goal is to optimized cellular function. This allows for appropriate, sustained cardiac response to varying conditions.

Suggested uses:

- CHF
- Hypertension
- Circulatory weakness
- Arrhythmia
- Loss of muscle tone
- Sedentary animals
- Neuromuscular disorders
- Coronary insufficiency

The heart is an amazing muscle, vital to the life of your pet. Providing nutritional support to the cardiovascular system includes other organs that support the heart such as the liver, kidneys, and digestive system. Canine Cardiac Support and Feline Cardiac Support provide nutrients that support optimal cardiac function, as well as natural muscle cell healing and regeneration.

The ingredients in Standard Process Canine Cardiac Support and Feline Cardiac Support feed several important organs such as the heart, vasculature, autonomic nervous system, liver and kidneys. Ingredients in Canine and Feline Cardiac Support contain whole vitamin complexes in addition to other important phytonutrients and synergists.

Your veterinarian may suggest the use of Canine Cardiac Support or Feline Cardiac Support when your pet needs general cardiac support, has an increased cardiac demand or is in conditions that increase cardiac workload as indicated by cardiac auscultation, ECG, thoracic radiographs, and echocardiography. As always, your veterinarian and Standard Process have your pet's well-being in mind. You can rest assured that the addition of nutritional support is part of a well-rounded healthcare plan for your pet.
