

Enteric System Support

Enteric Support brings together a combination as whole food nutrients and tissue factors. This combination provides synergistic, multidimensional support for the diseased intestinal tract. Intestinal physiology is a complex interaction of many physiologic activities. Therefore, the primary focus of this product is support of the intestinal mucosa, digestive secretions, intestinal motility, intestinal immunity, and liver. Providing nutrients and important substrates for each of these areas can facilitate both repair processes and optimal function.

Enteric Support is an important part of the support plan for all patients with GI disease. The range of ingredients supports the intestine in multiple ways that facilitate repair of the intestinal tract. Areas that are supported include salivary, gastric, biliary, and endocrine pancreatic secretions.

"All disease starts in the gut" – Hippocrates

Suggested uses:

- Digestive disturbances
- Liver function
- Kidney function
- Food sensitivities
- Pancreatic insufficiency
- Skin allergies
- Immune problems

A healthy digestive tract is critical to the overall health and well-being of your pet. The digestive health of an animal can impact not only the breakdown and absorption of nutrients, but can also have a significant impact on other body systems such as the immune system, liver, bone marrow, or adrenal glands. Canine Enteric Support and Feline Enteric Support contain a variety of functional foods that “feed” the various parts of the digestive system.

These products offer support of the intestinal lining, digestive secretion, intestinal motility, intestinal immunity, and the liver. Ingredients in these products include whole vitamin complexes, phytonutrients, minerals and beneficial foods.

Your veterinarian may suggest the use of Canine Enteric Support or Feline Enteric Support for GI issues such as food sensitivities, diarrhea, after vomiting has resolved, or when added support is warranted during times of stress.

As always, your veterinarian and Standard Process have your pet’s well-being in mind. You can rest assured that the addition of nutritional support is part of a well-rounded healthcare plan for your pet.
