

## Immune Support System Support

The immune system is a complex array of cells that are found throughout the body. Collectively, immune cells are designed to function in conjunction with other immune cells to provide a defense against invasion of microorganisms. However, it should also be recognized that the defensive role of the skin and mucous membrane is to provide the first layer of protection. Adequate function of the membrane barrier can prevent invasion of microorganisms. Immune support is designed to utilize the immune cell and membrane barrier supportive effects of a variety of whole food nutrients, tissue factors, and botanical ingredients. Patients who have acute immune demands or immune systems that are under chronic stress will benefit from this product.

### Suggested uses:

- Acute/Chronic infections
- Ear infections
- Chronic lesions
- Slow healing
- Allergic reactions
- Inflammatory conditions
- Low resistance
- Stress

The immune system is one of the most important systems in your pet's body. When working normally, it helps them live a happy and healthy life. They can hunt, play, or run laps throughout the house. But what if their immune system is compromised? Immune Support provides vitamins, minerals, organ and tissue extracts, and botanicals not normally found in your pet's diet. These nutrients in Immune Support, known as functional foods, have been shown to contain a wide range of trace nutrients that benefit specific organs and tissues.

Your veterinarian may recommend Immune Support for illness, puppies/kittens development, pregnancy, senior pets and pets under stress.
